

## HOW IT WORKS

The Xtender system uses the Cables already in your home to create three new TV channels. RED, GREEN, and BLUE.

Plug a Tivo into the RED channel on Xtender, then in your bedroom simply press the RED channel button and you instantly see the Tivo on that bedroom TV. You now have full control of the Tivo even if your bedroom is on the other side of your home from where the Xtender is located.

The secret of the remote control is its ability to wirelessly control your devices from across your home.

## Your movies, Your Music, Your Tivo - Your Way

It only takes one box in your living room and new remote controls in each room and the whole-home entertainment experience of a high end system is yours for the price of a Tivo. .

Installation only takes 20 minutes to install  
Hook up Xtender - just like a DVD player  
Replace your Cable splitter with Supercombiner  
Program the remotes  
Start enjoying whole home entertainment

Available through the BOCS network of local professional installers - see the bocs website to find a dealer near you.
